

PEDAL OPERATED AUTOMATIC EYELETING MACHINE

29FEI

Entirely pneumatically powered, this machine automatically punches a hole and inserts the eyelet and washer to complete the fastening in a single operation. Eyelets and washers are fed automatically by means of hopper fed raceways. The washer, either toothed or necked, is positively positioned by a slide mechanism at the bottom of the washer raceway. The machine is delivered set for the specified size of eyelet and comes on its own bench and with a toolkit.

The 29FEI is tremendously strong, capable of setting eyelets with hole diameter up to 16mm. This machine is also suitable for our 12mm plastic eyelet and washer.

Auto eyelet feed

Auto washer feed

Moveable pedal

Specification

Height	158cm
